

IV Pole Medical Hook

When working with a patient it is very important to keep everything as sterile as possible. Once an object, such as an instrument or IV tubing, touches the floor it is no longer sterile. The possibility of infection is now a serious concern. Also, when a patient has a catheter, the bag is normally hooked on the side of the bed. This makes it very difficult to move around with the IV pole. It also causes difficulty when moving from the bed to the bathroom.

We are all trying to do a good job and limit our liability to avoid accidental infection and lawsuits. Here is a great example. A patient needs to move around while connected to an IV. He or she must bring the IV pole with them wherever they go. The tubing drags on the floor and becomes contaminated. Later a nurse, C.N.A., or an anesthesiologist, need to remove or replace the IV or IV tubing and then working with the patient everything the IV tubing has touched is now on their hands and transferring to the patient.

Here are just a few of the benefits of using the IV Pole Medical Hook:

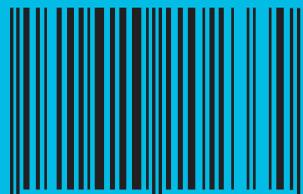

- **Now you can add a hook anywhere on the IV pole.**
- **You can add as many IV hooks as needed.**
- **You can hook additional IV bags, blood bags and/or catheter bags on one pole and not on the bed. This makes it easier for the patient to move.**
- **The IV Pole Medical Hook can be attached to the pole on the wheel chair when the patient is being transported for testing.**
- **The IV Pole Medical Hook limits the number of IV poles in a room and the amount of tubing exposed on the floor.**
- **Reduces tripping and falling by the patient, visitors, doctors, nurses and other medical staff.**
- **Will help Anesthesiologists keep their tubing separated when administering medication to the patient**
- **The IV Pole Medical Hook helps to keep the weight of the IV bag, blood bag, etc closer to the center of the pole, to prevent tipping.**

The IV Pole Medical Hook is used as an additional hook on the 1 1/4", 1", 7/8" or we can make it to fit. Certain situations call for more IV bags then the current poles were made to handle. The solution is the IV Pole Medical Hook. Liability is greatly reduced and peace of mind is restored. **The IV Pole Medical Hook does not come sterilized. Use same cleaning solution as used on IV Pole.**

Item # PSM333B

Description: IV POLE MEDICAL HOOK

Quantity: 24 pc

7 47683 10260 2
